ALL AGREEMENT STATES, MICHIGAN

INFORMATION REQUEST: STATUS OF CURRENT COMPLEX DECOMMISSIONING AND URANIUM RECOVERY SITES (FSME-10-059)

Purpose: To update information on the status of decommissioning activities at materials and uranium recovery sites. This information will be used to update the Nuclear Regulatory Commission’s (NRC’s) annual report titled, “Status of the Decommissioning Program,” as well as the NRC’s public website. A response is requested within 30 days.

Background: Since the early 1990’s, the NRC has prepared an annual report providing the status of NRC’s decommissioning program. In 2006, the Commission directed the staff to expand its discussion of Agreement State decommissioning/reclamation activities to present a national perspective on decommissioning. With this in mind, the NRC staff requested that the Agreement States provide a listing of all “complex” sites undergoing decommissioning and a listing of uranium recovery sites undergoing reclamation, for inclusion in NRC’s annual report, “Status of the Decommissioning Program.” NRC regards complex sites as those that are required to provide a decommissioning plan or sites that require formal NRC or State approval prior to being decommissioned. Last year, NRC staff requested and received site summaries for all complex materials sites and uranium recovery sites undergoing decommissioning in the Agreement States. This information was placed into a database for publication on NRC’s public website to ensure openness and provide a national perspective on decommissioning. The NRC’s decommissioning program would like to continue to present a national perspective on decommissioning, which would include updated information from the Agreement States on each of their complex decommissioning and uranium recovery sites.

Discussion: Last year, Agreement States were asked to provide a point-of-contact to receive a unique username and password for the purpose of updating site information within the NRC-created database of site summaries. If there is a change with the point-of-contact, please provide the updated contact information within 14 days of the date of this letter. Please provide the updated site information requested in the enclosure, either by updating the site summaries directly through the database or by emailing the information to one of the NRC points-of-contact. If you do not have any decommissioning or uranium recovery sites, please send a response to indicate this. We would appreciate receiving your response within 30 days of the date of this letter.

*This information request has been approved by OMB 3150-0206, expiration 03/31/2011. The estimated annual burden per response to comply with this voluntary collection is approximately 20 hours. Send comments regarding the burden estimate to the Records and FOIA/Privacy Services Branch (T-5F52), U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, or by Internet e-mail to infocollects@nrc.gov, and to the Desk Officer, Office of Information and Regulatory Affairs, NEOB-10202 (3150-0206), Office of Management and Budget, Washington, DC 20503. If a means used to impose an information collection does not display a currently valid OMB control number, the NRC may not conduct or sponsor, and a person is not required to respond to the information collection.
NRC Point-of-Contact: Please have the designated State point-of-contact direct all responses and questions with respect to this correspondence to Richard Chang or Kim Conway, Office of Federal and State Materials and Environmental Management Programs, at the telephone numbers or e-mail addresses listed.

POINT OF CONTACT: Kim Conway
TELEPHONE: 301-415-1335
INTERNET: Kimberly.Conway@nrc.gov
FAX: (301) 415-5397

POINT OF CONTACT: Richard Chang
TELEPHONE: 301-415-7188
INTERNET: Richard.Chang@nrc.gov
FAX: (301) 415-5397

/RA/
Robert J. Lewis, Director
Division of Materials Safety and State Agreements
Office of Federal and State Materials and Environmental Management Programs

Enclosure:
Current Complex Decommissioning and Uranium Recovery Sites
Current Complex Decommissioning and Uranium Recovery Sites

For each site in each Agreement State, please provide:

- Any updates regarding the designated point-of-contact for updating site summaries (requested within 14 days of the date of this letter)
- An updated site summary for each current complex decommissioning and uranium recovery site (requested within 30 days of the date of this letter)
- Financial assurance status information (requested within 30 days of the date of this letter)

Agreement State Point-of-Contact

Last year, Agreement States with decommissioning and uranium recovery sites were asked to provide a designated point-of-contact and associated contact information (e.g., e-mail address, and telephone number) so that the U. S. Nuclear Regulatory Commission (NRC) staff could issue a unique username and password for the Site Summaries Database. This allowed for easier updates to each Agreement State’s site summaries.

If there are any changes to the designated point-of-contact or their contact information, please provide this information. Access and use of the password for the site summary database should be limited to the point-of-contact or their designees to reduce the possibility of database corruption.

Updated Site Summaries for Each Current Decommissioning or Uranium Recovery Site

For your convenience, site summaries provided to the NRC in 2009 are available for updating on the Site Summaries Database. If preferred, a letter or e-mail with updated site summaries could be used to respond to this request.

For any new decommissioning or uranium recovery site, please discuss the site operational status, type of operational activity under license or authorization, past owners, past history of transfers, related authorized activities, areal size & configuration, types of materials under control, cleanup criteria, significant radionuclides, types and volumes of contaminated media, dates and progress of any remedial or decontamination activities, release provisions (e.g., for unrestricted use or restricted use), institutional control provisions, other Federal or State agencies’ involvement (e.g., partial site under Comprehensive Environmental Response, Compensation, and Liability Act mandate), inspection history and noteworthy characteristics of site and contamination (e.g., arid conditions; groundwater quality class). Examples of site summaries for NRC-licensed complex decommissioning are available at URL: http://www.nrc.gov/info-finder/decommissioning/complex/.

Financial Assurance Status

Under a separate letter or e-mail, please address the financial assurance arrangement (e.g., prepayment, surety, insurance, guarantee, external sinking fund, or statement of intent) with respect to each complex facility’s decommissioning plan or uranium recovery site reclamation plan. This should describe the sufficiency of the financial instrument for assuring completion of Enclosure
decommissioning or reclamation. Include information about the entity responsible for
decommissioning. To the extent that it is available, the description should track the original
financial assurance estimate and changes over the lifetime of the operation to keep the financial
assurance instrument up-to-date. If the site will be a restricted release site, then the provisions
to provide financial assurance should also be discussed. For all of the complex sites and
uranium recovery sites undergoing decommissioning/reclamation, please indicate whether there
is a plan for assuring the availability of adequate funds for completion of
decommissioning/reclamation. Due to the potentially proprietary nature of this information,
please do not input this information into the Site Summaries Database.

In collecting this information for each complex decommissioning or uranium recovery site, the
Agreement State is requested to indicate whether there are any licensees or site owners who do
not have sufficient funds to complete decommissioning/reclamation. If so, please address the
following questions:

1) What is the site’s name, location, and license status?

2) Is the site owner a licensee?

3) What is the estimated cost of decommissioning/reclamation? Do you rely on the site
owner’s cost estimate, or have you done an independent estimate?

4) How much financial assurance has the site owner provided? (It would be considered
inadequately financed if the amount of financial assurance is less than the estimated
decommissioning/reclamation cost.)

5) Does the site owner have access to funds in addition to its financial assurances, such
that it is possible that the owner will complete decommissioning/reclamation?

6) What are the primary radionuclides and estimated volume of contaminated material?

7) What actions have been taken to encourage the site owner to either complete
decommissioning/reclamation or provide financial assurance adequate to cover the
decommissioning/reclamation cost estimate?

8) What issues are pending and what is the path forward to obtain adequate funds and/or
financial assurance?
How Financial Information Will Be Treated

The financial information provided in response to this letter shall be treated as confidential, if so requested by the transmittal letter responding to this information request. The NRC confidentiality provisions are addressed in 10 CFR 2.390 and 10 CFR 9.17. If the supplied financial information is to be treated as sensitive, an affidavit must accompany the transmittal, as specified in 10 CFR 2.390(b).

Please note that should any Freedom of Information Act or similar State-equivalent provision for releasing information to the public be invoked within an Agreement State regarding financial information of an NRC-materials licensee or NRC-regulated materials site undergoing decommissioning, the Agreement State will refer such requests to the NRC. The NRC will consult with the relevant Agreement State authority in responding to any such request for Agreement State controlled materials sites undergoing decommissioning.

Information on the status of financial assurance for any NRC-controlled materials facility undergoing decommissioning would be circulated under the provisions of Office of Federal and State Materials and Environmental Management Programs Procedure SA-800, as Radiation Control Program Directors (RCPD) letters. This financial status information is considered Sensitive Unclassified Non-Safeguards Information (SUNSI), because it may be designated as proprietary information at the licensee’s or site owner’s formal request. Such information containing SUNSI is provided to Agreement States that can protect the information from public disclosure on a “need-to-know” basis only, and in accordance with NRC Management Directive (MD) 3.4, Release of Information to the Public. Whether the Agreement State can provide this degree of protection or not must be formally stated in reply to this letter. Should the Agreement State not be able to provide this protection, NRC-controlled decommissioning site financial status information will be withheld from that Agreement State. For those NRC-controlled decommissioning sites not requesting that financial assurance information be withheld, the financial assurance status will be routinely provided to all of the Agreement States.

Additional Information

Please feel free to include any additional information that you feel will assist in understanding the types of facilities that are being decommissioned/reclaimed in your State and any issues associated with the decommissioning/reclamation of these sites.
