Background Information on Working Groups

Agency policy with regard to the establishment and implementation of NRC/Agreement State working groups is contained in Management Directive 5.3 "Agreement State Participation in Working Groups" (ML070940610).

Either NRC Headquarters or Regional office, or the Organization of Agreement States (OAS) Executive Board, may recommend the establishment of an NRC/Agreement State working group to address a wide range of issues and to develop a variety of different products. The final decision to establish a new working group is made by the Director of Materials Safety and State Agreements (DMSSA) from the Office of Federal and State Materials and Environmental Management Programs (FSME). The Management Directive 5.3 requires a working group approach be used when State input is needed to help ensure State views are considered in the development of an NRC product, such as a new or amended rule or guidance document.

Working groups provide a means for NRC and State staff to work cooperatively in the development of a rule, policy, directive, guidance document, or to participate in a special study. These working groups enhance the partnership between NRC and the States, facilitate the utilization of the centers of expertise that exist in the NRC regions and the States, and support the ongoing development of the National Materials Program. Representatives of the Conference of Radiation Control Program Directors (CRCPD) may be requested to participate if broader State participation is desired, or the issue involves topics affecting non-Agreement States or all the States. Other Federal agency representatives may also participate as necessary, depending on the purpose and scope of the working group.
